

## Technische Universität Darmstadt

Darmstadt, 2015 Ongoing project  
Research facilities, Schools/educational facilities, Listed buildings

Since its construction in the 1960s, the legendary institute building for architecture at Darmstadt Technical University, known for its special atmosphere, has been a place for many student generations to study and work. Now it is in need of thorough renovation.

The complex was the first building to be built on the "Lichtwiese" campus and it has listed building status, due to the special nature of the design - the so-called "Darmstadt building system".

Now it is time to remedy some shortcomings and problems, especially in the building shell, and to prepare the building for the next generation of architecture students, in keeping with its original concept and use.

schneider+schumacher, working as project planners until 2018, was responsible for the listed building refurbishment.
